Varanasi, India

Education

Indian Institute of Technology (BHU), Varanasi — Varanasi, India
Bachelor of Technology in Mining Engineering; ***CGPA: 8.39/10.0*** — *Jul 2023 – May 2027*

Technical Skills

Languages & Frameworks	Go, Python, C++, Dart, FastAPI, Flutter, React
Backend & Distributed Sys	REST APIs, gRPC, SSE, Webhooks, Microservices, Kafka, Redis Asynq
Agentic AI & LLMs	Google ADK, OpenRouter, Context Engineering, Guard Models, Hallucination Mitigation
Databases & Infra	PostgreSQL, Redis, Apache Solr, Memgraph, Docker, Linux, Git, Grafana k6

Experience

Software Engineering Intern | *COPIOUS · Tripple Double* — Jun 2026 – Aug 2026

- Built a **Flutter** split-screen web portal with auto-save and rule-based validation for FIBA scoresheet digitization.
- Engineered a **VLM** OCR pipeline via **OpenRouter**, A/B testing models to optimize accuracy vs. cost.
- Reduced hallucination and token costs via dynamic prompts, **JSON key aliasing**, and output-embedded reasoning.
- Cut operator cost by **91.92%** ($0.52 → $0.042) and entry time by **73.33%** (30m → 8m) via pre-filled entry.

Flutter Developer Intern | *Vrajpath iTech LLP* — Dec 2024 – Jan 2025

- Reduced API requests by ∼**30%** via **Riverpod** state caching, validated in **Dart DevTools**.
- Integrated **Razorpay** for secure payments and **Google Maps** for real-time geolocation.

Projects

Flowback – AI Revenue Recovery Platform | *Go, React, Redis, Asynq, Google ADK* | dis70rt/Flowback | Demo
An autonomous, event-driven pipeline that intercepts failed SaaS payments and deploys AI agents to recover revenue.

- Queued webhooks via **Go** + **Redis Asynq**, scaling workers freely with idempotent, effectively-once processing.
- Orchestrated a multi-agent **Google ADK** graph where copywriter and **Gemini TTS** agents drive outreach.
- Wrote a **Go** policy engine enforcing hard rules (discount & contact limits) so no hallucination touches a transaction.
- Streamed agent state to a HITL **React** dashboard via **Redis Pub/Sub** and **SSE**, eliminating all polling overhead.

TradeOrders – Order Matching Engine | *Go, Kafka, PostgreSQL, Redis, Docker* | dis70rt/TradeOrders
Solved lock contention in high-volume trading via an event-driven architecture, scaling throughput 18x.

- Decoupled API from DB via **Kafka**; throughput jumped from **1k req/s** to **18.8k req/s** with **0 errors**.
- Partitioned Kafka topics by instrument for **lock-free**, sequential matching, enabling concurrent process per symbol.
- **Grafana k6** load tested at **7,624 VUs**, measuring **231ms p95 latency** on an Intel i5-13500HX.

Bluppi – Shared Music Playback | *Go, gRPC, PostgreSQL, Redis, Solr, Flutter* | backend / frontend | bluppi.saikat.in
A real-time synchronization engine that fixes network lag across distributed devices.

- Designed **PTP-style** clock synchronization with **quorum-based** buffering for consistent playback across devices.
- Tracks online presence via a **gRPC** gateway: **51k** concurrent connections with 0 errors and **p99 15ms** latency.
- Live ephemeral chat via **Redis Pub/Sub**, social features via **Memgraph**, and a 500GB music catalog via **Solr**.

SubPaper – Reddit Wallpapers App | *Flutter* | dis70rt/subpaper | subpaper.saikat.in | Play Store (Archived)
A mobile application that aggregates and caches high-res wallpapers directly from Reddit.

- Published Reddit wallpaper app to Play Store. **300+ downloads**, **4.5/5 rating**.
- Implemented on-device caching for fast content delivery and integrated **AdMob** for monetization.

Achievements

Won **1st Place** at the **BNY Hackathon**, building a solution for **transaction processing & settlement**.	Apr 2026
Received a **Special Mention** at the **e6Data Hackathon** for building a **QQL** system.	Oct 2025
Secured **2nd Place** at the **Nutanix Hackathon** by building WizFlow, a **real-time workflow engine**.	Apr 2025
Ranked in the **Top 9.22%** globally on **LeetCode** with a **1,778** peak rating and **256+** problems solved.	Present
Achieved **Pupil** rank (**1,217** Max Rating) on **Codeforces**, solving **150+** algorithmic challenges.	Present
